Just listen to Dual

If you think you've seen the latest in hearing devices, you're in for a surprise! With today's technology you won't have to make yesterday's sacrifices.

With Dual, great sound never looked better. Invisible behind the ear, others won't see it. But you will definitely *hear and feel* the difference.

With Dual you'll notice how much clearer speech sounds in noisy situations. How using a mobile phone is simpler. How watching TV feels more enjoyable. And how sounds – and people talking – become so much easier to locate.

We know that with Dual you'll discover new depths to your hearing you thought were impossible to achieve. But don't just listen to us – listen to Dual...

A beauty on the outside A sensation on the inside

Who says you have to choose between great design and outstanding performance? With Dual you can have both! Dual's iconic good looks outshine anything else on the market – and it works in a way no other devices can.

While standard hearing aids work alone, a pair of Duals will continuously communicate using wireless technology to preserve the location and direction of sounds around you. With Dual you will perceive sounds the way Mother Nature intended.

Dual's exceptionally crisp, clear and comfortable sound quality can be attributed to a unique concept called Spatial Sound. This will take you closer than ever to natural hearing – so you can feel more like yourself again!

Don't think life can't get any better

Spatial Sound can make all the difference

As a concept, Spatial Sound is to hearing devices what high-definition digital imaging is to TVs. With Spatial Sound you won't have to think about where sounds are coming from – you will know.

Dual can reveal sounds in their natural arrangement, so you can intuitively single out individual sound sources and voices. The extra 'audio resolution' injects vibrancy, clarity and depth into your sound picture, so you can feel more confident and more anchored than you've ever felt before.

Dual also captures a wider range of sound than any other devices – particularly in the high frequencies. These extra details mean that speech will sound clearer and music far richer. Wherever you are and whatever you are listening to, with Dual sounds will make sense once more.

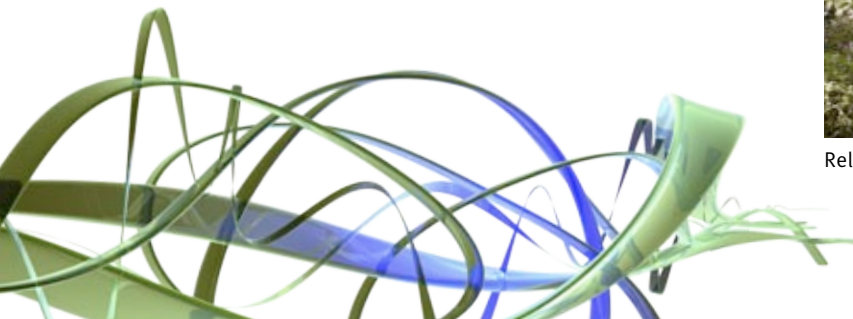

Don't just be there, be part of it

Know where to look – without even thinking about it

Relax and enjoy clear, crisp and comfortable sound quality

Get connected

Wouldn't you like to watch TV without overwhelming the rest of the family? Or talk on your mobile phone without the stress of annoying feedback? Now you can with a smart optional accessory called the Streamer!

The Streamer helps you get connected in comfort. By sending sound wirelessly, straight into both ears it literally turns Dual into a tiny hands-free headset.

Connect your television, mobile phone, MP3 player, computer or any other device that is Bluetooth compatible to the Streamer. And switch from listening to music to answering a phone call at the mere touch of a button.

The Streamer even works as a remote control for Dual, so you can change the volume or switch listening programs with ease.

The Streamer comes in black or white for the Dual Connect Series (except Dual Pro).

Don't wait too long

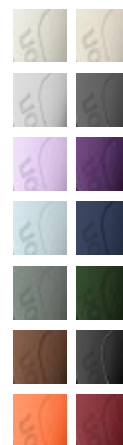

It's time to get closer to natural hearing

With Dual you don't have to fight today's battle with yesterday's technology; you CAN keep moving forward.

From size and colour to performance, accessories and settings, a pair of Duals can be completely customised to suit your personal preferences and level of experience with hearing technology.

Dual comes in two versions: Dual Connect and Dual Mini. No matter which style your hearing care professional recommends for you, Dual will exceed your expectations.

But don't just listen to us. Act today and experience Dual for yourself.

All Dual models are available in 14 colours.

People First

We believe that it takes more than technology and audiology to create the best hearing instruments. That's why we put the individual needs and wishes of people with hearing loss first in our development of new hearing care solutions.
