

# Oticon ♦ Dual

New to hearing devices?

Don't let excuses get  
in the way of your life

PEOPLE FIRST

# Getting hearing devices isn't about getting old

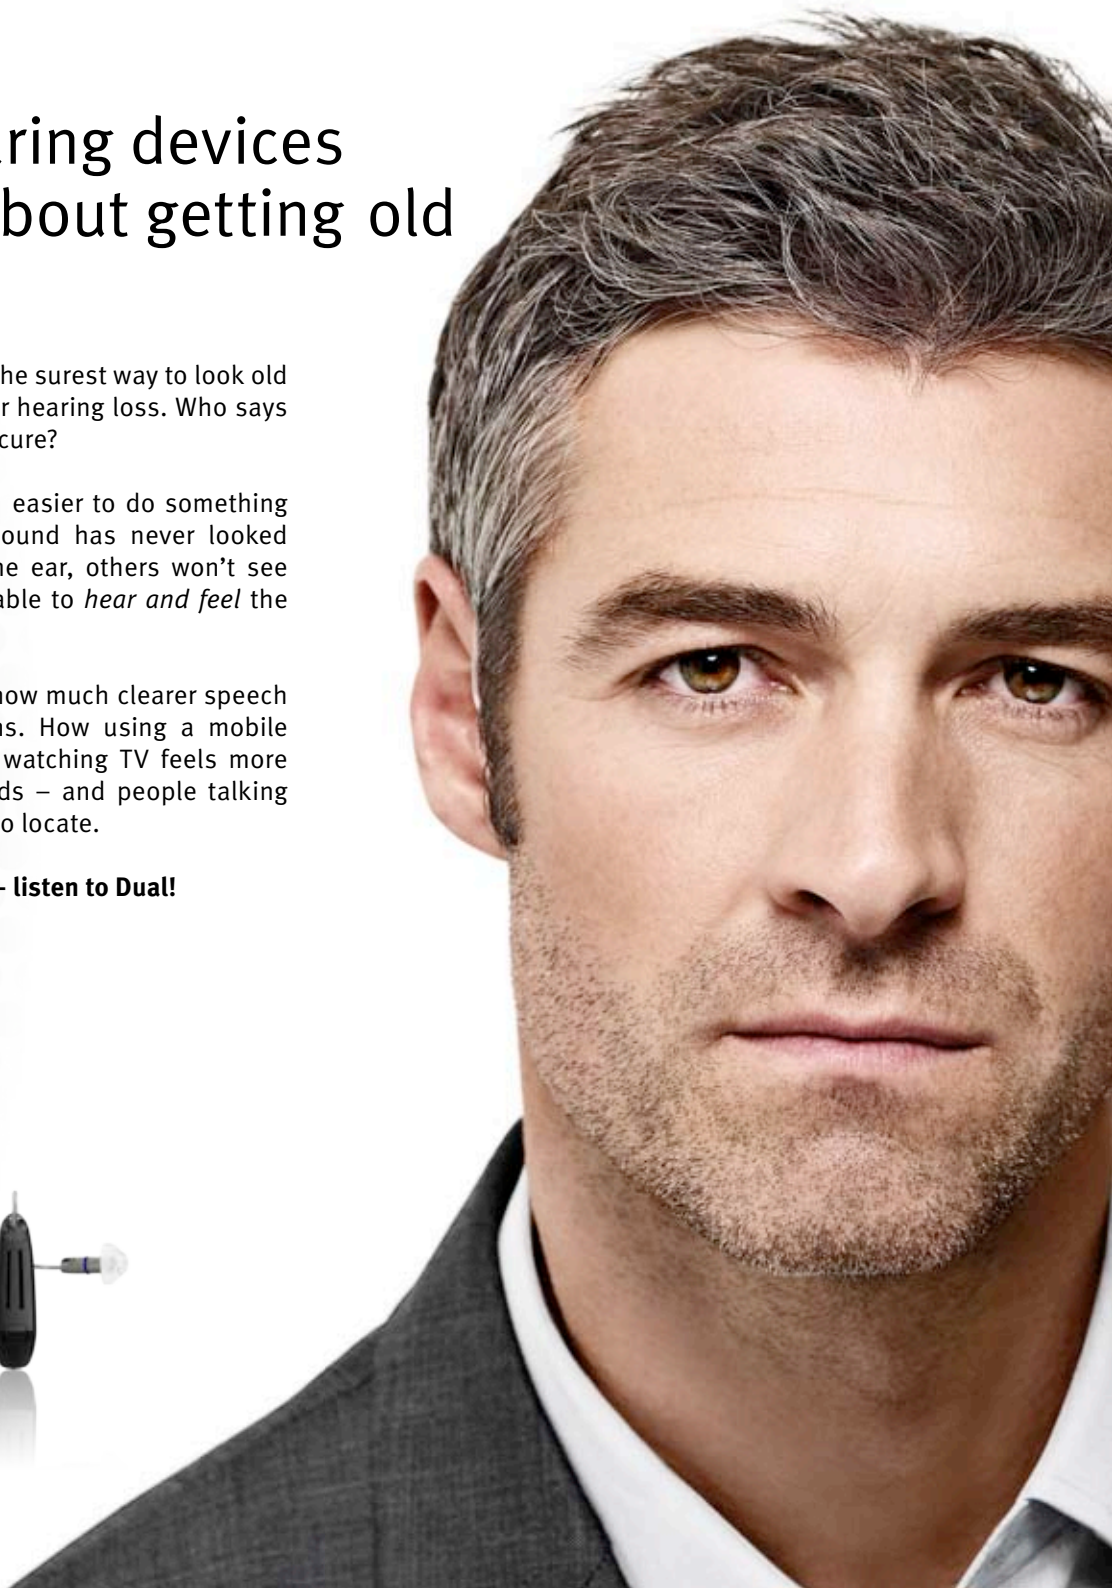

## ... it's about being smart

We all make excuses. But the surest way to look old is to do nothing about your hearing loss. Who says the pain is better than the cure?

With Dual, it's never been easier to do something about it because great sound has never looked better. Invisible behind the ear, others won't see Dual at all. But you'll be able to *hear and feel* the difference.

With Dual you will notice how much clearer speech sounds in noisy situations. How using a mobile phone gets simpler. How watching TV feels more enjoyable. And how sounds – and people talking – become so much easier to locate.

**But don't just listen to us – listen to Dual!**

# A beauty on the outside A sensation on the inside

Who says you have to choose between great design and outstanding performance? With Dual you can have both! Dual's iconic good looks outshine anything else on the market – and it works in a way no other devices can.

While standard hearing aids work alone, a pair of Duals will continuously communicate using wireless technology to preserve the location and direction of sounds around you. Because these devices work as one system, you'll perceive sounds the way Mother Nature intended.

With Dual your life will no longer be ruled by your hearing loss. You will be in charge again.

# Don't miss out on the conversation

## ... and the rest of your life

Let's face it. Saying "what" all the time is a sure path to social isolation. Rather than suffering in silence, wouldn't you rather relax and let the real you shine through? With Dual and Spatial Sound, you can.

As a concept, Spatial Sound is to hearing devices what high-definition digital imaging is to TVs. By revealing sounds in their natural arrangement, it helps you SEE as well as HEAR where sounds and voices are coming from. And with the extra details speech will sound clearer and music far richer.

Don't skip the party because you can't hear. Show up and feel confident that with Dual, you'll be able to join in even fast-flowing conversations – and enjoy it!

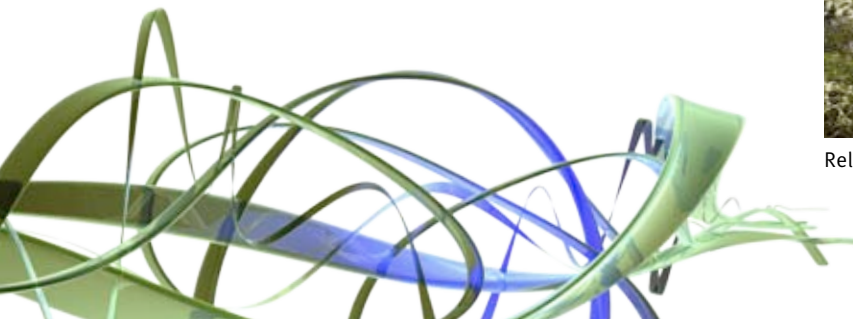

Don't just be there, be part of it

Know where to look – without even thinking about it

Relax and enjoy clear, crisp and comfortable sound quality

## Don't let watching TV cause an argument

### **Get connected – in comfort**

Let's face it. Watching TV with someone who has the volume three notches too high is tiresome. But with the Streamer – a smart, wireless optional accessory – you can tune into today's lifestyle technology in comfort.

By sending sound straight into both ears, the Streamer turns your Duals into a tiny hands-free headset. You can connect to your television, mobile phone, MP3 player, computer or any other device that is Bluetooth compatible to the Streamer.

With the Streamer you can switch from listening to music to answering a phone call at the mere touch of a button. It even works as a remote control for Dual, so you can change the volume or switch listening programs with ease.

The Streamer comes in black or white for the Dual Connect Series (except Dual Pro).

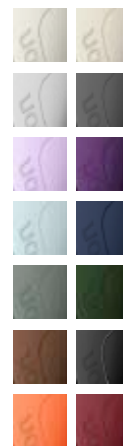

# Don't give up and fall behind

## **Move closer to natural hearing – in style**

Everyone can wear Dual and feel great about it. From size and colour to performance, accessories and settings, a pair of Duals can be completely customised to suit your personal preferences and level of experience with hearing technology.

There are two kinds of Dual: Dual Connect and Dual Mini. No matter which style your hearing care professional recommends for you, Dual will definitely exceed your expectations.

**But don't just take our word for it.  
Act today and experience Dual for yourself!**

All Dual models are available in 14 colours.

## People First

We believe that it takes more than technology and audiology to create the best hearing instruments. That's why we put the individual needs and wishes of people with hearing loss first in our development of new hearing care solutions.
